

A 20x20 grid heatmap where each cell is a square. The color of each square represents a value, with a color scale ranging from light pink (low values) to dark red (high values). The highest concentration of dark red is in the center of the grid, forming a roughly circular shape. This central area is surrounded by concentric rings of lighter shades of red and pink, indicating a radial gradient. The corners of the grid are the lightest pink, representing the lowest values in the distribution.
