

The heatmap displays a 15x15 grid of cells. The color intensity represents the 'number' variable, with a legend on the right indicating a scale from 0 (light orange) to 14 (dark red). The distribution is roughly circular, with the highest values (dark red, 14) located in the center of the grid (around row 7, column 7). The values decrease as they move towards the edges, with the lowest values (light orange, 0) found at the corners and along the outer perimeter of the grid.
